OPENTOP® SHOCK MOUNTED RACK 2U DEPTH 700 MM

A high-end 19" shock mounted rack for your delicate 19" equipment

Designed to meet the needs of the most demanding professionals, the 19" shock mounted rack Opentop® is the ideal solution for transporting and protecting fragile and sensitive equipment. Manufactured in Alsace (France) by Rythmes & Sons, the Opentop® rack is part of our premium range, combining robustness, ergonomics, and functionality.

Its 9 mm all-birch plywood structure ensures exceptional durability. The black hexagonal coating is ultra-resistant to shocks, scratches, and impacts, guaranteeing the safety of your equipment in all circumstances. The Opentop® stands out with its flat front and rear covers, which are sliding and retractable at the top. This opening/closing system prevents the covers from being misplaced while facilitating access to your 19" equipment. Its ergonomic OpenRoad® closure system, patented by Rythmes & Sons in 1996, allows for easy opening and closing with a single-pressure latch. For enhanced security, an optional lock can be added to prevent unauthorized access.

Designed for intensive use, this 19" rack is equipped with recessed handles with a double return spring, ensuring automatic retraction to a flat position to prevent snagging during handling. Reinforcement brackets are installed inside the rack to enhance durability and prevent deformation.

It also features recessed stacking cups, allowing multiple racks to be stacked with optional wheels, as well as plastic stacking feet for stable and easy stacking without wheels.

The 19" shock mounted rack Opentop® is also equipped with steel racking profiles at the front and rear, mounted on Silentblocks to absorb shocks and protect the integrity of your 19" equipment. To secure your equipment in the square-hole racking profiles, M6 cage nuts are provided.

To simplify equipment management, the Opentop® rack includes an A5-format tour label cup, allowing you to attach documents or labels for quick and easy content identification, avoiding errors during transport or storage.

Developed and manufactured by Rythmes & Sons in France
